

Alexander [Sasha] Chichagov is an environmental scientist at the Canada Centre for Remote Sensing, Earth Sciences Sector, Natural Resources Canada.

Since the very early years, Sasha has tapped into his creative side, working in water colour, gauche painting, sculpting and illustrating books, to name but a few.

After graduating from high school in Moscow (USSR), Sasha found himself at a crossroads. Should he follow in his parents' and grandparents' footsteps and go into science or would it be the arts?

While studying science (physical oceanography) at Moscow State University, Sasha was involved in stage design for several theatrical shows.

After 25 years working as a scientist in Russia and Canada, Sasha is successfully applying his creativity at work and at home, rediscovering oil painting as one of his favorite hobbies.

Working in his studio in the Gatineau Hills in great harmony with nature, Sasha experiments with various techniques and styles.

There are portraits and still lifes, landscapes and abstract pieces in a powerful synergy of art and science.

As new paintings are created, his personal website is updated <http://chichagov.com>.
